Set 01

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 You are leaving the company. Your manager says you may keep “examples of your work.” A guide you wrote has no customer names but contains unpublished operating methods. Its information owner has not approved release. You can remove the logo without changing its content. Which is the best next action?

- ☐ **A.** Remove branding and customer references, then retain the guide with your manager’s email as evidence of permission.
- ☐ **B.** Ask the information owner to approve the specific release version before transferring it using the permitted method.
- ☐ **C.** Keep only the sections you personally authored, documenting that they will be used as professional reference material.
- ☐ **D.** Retain an encrypted copy privately until your new employer confirms whether the guide will be useful.

2 A caller knows the number and details of your real support ticket. They ask you to approve a phone notification to restore access. The notification describes a sign-in, not remote support. You have not initiated a sign-in. The caller offers confirmation from their work email. Which is the best next action?

- ☐ **A.** Request the corporate email and approve if its ticket number, fault description and sender name match your support record.
- ☐ **B.** Decline the notification and contact the Service Desk through the published number to validate that specific support step.
- ☐ **C.** Ask the caller to confirm the assigned technician’s name and approve if it matches the technician listed on your ticket.
- ☐ **D.** Request a fresh notification and approve while watching your screen, ending the call if an unexpected window appears.

3 You notice an email rule forwarding project messages externally. You do not remember creating it. The recipient is a genuine adviser, but you cannot confirm that automatic forwarding was approved. A teammate suggests deleting it quietly because the messages were relevant to the adviser’s project. Which is the best next action?

- ☐ **A.** Use the approved route to stop the unexplained forwarding and preserve its details for an assessment of authorization and scope.
- ☐ **B.** Delete the rule and obtain the adviser’s deletion confirmation, reporting the issue only if another unexplained rule appears.
- ☐ **C.** Confirm the adviser’s project contract and leave forwarding active until the project owner checks whether it was requested.
- ☐ **D.** Change your password and remove the rule, treating the matter as resolved if no further project messages are forwarded.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 02

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 An accepted project invitation is updated with an external archive. The organizer confirms the change in the same chat. Another attendee reports that the link prompted an unexpected work sign-in. Late material updates are normal for this organizer, and the meeting starts in ten minutes. Which is the best next action?

- ☐ **A.** Ask the organizer to upload the archive to the internal project folder, then open that copy through company sign-in.
- ☐ **B.** Ask the organizer in the same chat which sign-in screen is expected, proceeding if their explanation matches the attendee's experience.
- ☐ **C.** Pause access and report the update and sign-in behavior, validating the organizer's request through a separate trusted channel.
- ☐ **D.** Scan the link using the company service and proceed if it reports no threat, retaining the organizer's written confirmation.

2 The owner approves three files for a contractor's two-week assignment. IT offers either named access to those files or read-only access to the whole project folder. Both expire automatically and record activity. The contractor prefers the whole folder to handle questions that might arise later. Which is the best next action?

- ☐ **A.** Use expiring read-only access to the project folder, documenting that the contractor should consult only material relevant to the assignment.
- ☐ **B.** Use named access to the three approved files, seeking a specific scope extension if an additional business need actually arises.
- ☐ **C.** Use the project-wide role during business hours only, balancing broader document access with a shorter daily window for its use.
- ☐ **D.** Provide the approved files and a copy of the project's other documents with names removed, preserving context without direct identifiers.

3 A document edit is attributed to someone who left eight months ago. The edit is harmless. A scheduled reporting process still displays that person's name, but you cannot tell whether it made this change. No unusual sharing is visible, and you do not manage the account. Which is the best next action?

- ☐ **A.** Classify the event as unauthorized use and ask the team to suspend the reporting process until account ownership has been corrected.
- ☐ **B.** Record the reporting process as the explanation and reopen the matter if later edits change content or external sharing permissions.
- ☐ **C.** Send the record and timing to the responsible IT or Security team to validate the activity and any remaining account access.
- ☐ **D.** Ask the former employee whether they made the edit before deciding whether the reporting owner or Security needs to become involved.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 03

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 Your cross-department project needs staffing totals. A search opens individual HR records that your account can view. Your manager says broad project sponsorship should cover their use. The project brief requires only aggregate figures, and the HR information owner has not authorized individual records. Which is the best next action?

- ☐ **A.** Calculate the totals without downloading records, since the project output will not name or describe any individual employee.
- ☐ **B.** Get your manager's written confirmation of project sponsorship and use only records needed to calculate the figures in the brief.
- ☐ **C.** Obtain the approved aggregate source and raise the unexpected individual-record access with the information owner without exploring further.
- ☐ **D.** Remove names from your working notes and seek the HR owner's confirmation before publishing the resulting aggregate figures.

2 An official company social account posts an unusual staff-benefits link. A marketing colleague recalls a possible agency campaign but cannot confirm this post. Employees are sharing it internally. You are not an account administrator, and the campaign owner cannot be reached right now. Which is the best next action?

- ☐ **A.** Report the post promptly with the possible campaign context so authorized owners can validate it and manage any exposure.
- ☐ **B.** Ask employees to pause sharing and await the campaign owner's reply before escalating a post that may have been intentionally scheduled.
- ☐ **C.** Ask marketing to delete the post and consider the exposure contained if nobody reports entering information on the linked page.
- ☐ **D.** Compare the page's branding with past agency campaigns and escalate if its design or privacy wording differs from an approved example.

3 A colleague downloads far more files than usual. Their account and laptop are expected, with no external transfer identified. They recently joined an approved records migration. You are helping assess the activity, but nobody has compared the downloaded files with that migration's actual scope. Which is the best next action?

- ☐ **A.** Recommend access suspension until the colleague explains the increase, since their historical download pattern has changed substantially.
- ☐ **B.** Compare the files and timing with the documented migration scope before deciding whether the change represents an unexplained concern.
- ☐ **C.** Close the review using the approved migration assignment and normal device information as sufficient explanation for the increased volume.
- ☐ **D.** Obtain retrospective manager approval for the downloaded collection and use that approval to resolve whether the activity was appropriate.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 04

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A text about your expected delivery names your correct building and asks you to confirm details through a link. Your independently opened courier tracker still shows the parcel in transit. A reply from the text sender provides a tracking number matching your order. Which is the best next action?

- ☐ **A.** Use the text link after comparing the full tracking number, treating the matching order and address as evidence of a genuine delivery request.
- ☐ **B.** Ask the text sender for a delivery-reference email and proceed if its order details match the text and your purchase confirmation.
- ☐ **C.** Check the requested change through the courier's independently obtained contact route before supplying information through the text's link.
- ☐ **D.** Open the link privately and confirm the courier's branding and encrypted connection before submitting only the requested address details.

2 Your account reports a successful sign-in while you were asleep. Your company's remote-access service sometimes changes apparent locations. Your account still works normally. The alert email has a prominent account-recovery button, but you have not independently established whether the email itself is genuine. Which is the best next action?

- ☐ **A.** Use the alert's recovery button to change the password immediately, then monitor whether any further unexpected sign-ins appear.
- ☐ **B.** Check whether the location could belong to the remote-access provider and close the alert if that explanation is geographically plausible.
- ☐ **C.** Open the account service through its known address and assess the unrecognized activity using the approved reporting and account-protection process.
- ☐ **D.** Add the alert to the next scheduled access review, escalating sooner if records disappear or the account stops working normally.

3 An owner approves a report for five named employees. The approved sharing service supports named-recipient links. Your team chat includes those employees and temporary staff who are not authorized recipients. The file is too large for email, and every proposed route keeps it on company systems. Which is the best next action?

- ☐ **A.** Post a company-only link in the chat and clearly identify the five employees who are permitted to open the report.
- ☐ **B.** Create a link restricted to the five named employees, confirm its access settings and share it through the approved work channel.
- ☐ **C.** Give the chat group read-only access and ask temporary staff not to open the report until the owner expands its approval.
- ☐ **D.** Put the report in the department's general folder and send its location privately to the five authorized employees rather than the wider chat.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 05

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 An approved AI assistant explicitly permits summaries of public company reports. You have checked the entire file, including notes, against the published version. A colleague says every AI upload needs an individual exception. Another suggests adding an internal forecast to improve the summary, although it is unnecessary. Which is the best next action?

- ☐ **A.** Request a separate Security exception for this report because approval of a tool cannot cover individual document uploads.
- ☐ **B.** Summarize the verified public report within the tool's stated approval and check the output against that source before using it.
- ☐ **C.** Include the forecast as supporting context, since the approved tool already processes reports for the same general business purpose.
- ☐ **D.** Use a public AI website for the published report, treating public availability as permission to choose any convenient summarization service.

2 A colleague needs a portal on your laptop while theirs is repaired. You have more record access than they do. You can supervise them, and your manager agrees it would save time. The portal would still use your signed-in account; IT can provide an approved alternative with some delay. Which is the best next action?

- ☐ **A.** Close unrelated applications and watch the colleague's work, documenting the time so any portal actions can be attributed afterward.
- ☐ **B.** Get your manager's written approval and permit access only to the relevant screen, signing out after the colleague completes the task.
- ☐ **C.** Open a private browser window under your session and let the colleague perform the task without accessing your existing browser tabs.
- ☐ **D.** Use the approved temporary access route, because supervision and a manager's convenience approval do not separate account permissions or individual accountability.

3 An approved internal AI assistant answers a routine project question using a restricted HR source. You are not authorized for that source. Your manager only needs the resulting aggregate figure and suggests deleting its citations. You have not yet shared the output and cannot verify the figure elsewhere. Which is the best next action?

- ☐ **A.** Remove the HR citations and names, provide the aggregate figure and ask the AI owner to improve source filtering afterward.
- ☐ **B.** Hold use of the affected output, report the unexpected disclosure and obtain the required figure from an authorized, verifiable source.
- ☐ **C.** Ask the assistant to regenerate without HR references and use the new answer if no restricted citations appear in its output.
- ☐ **D.** Confirm the figure is relevant to the project with your manager, relying on the approved internal tool's access controls for authorization.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 06

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 An external researcher sends credible screenshots of a possible weakness in your team's website, plus a "safe checker" attachment. You are the business contact, not an authorized tester. The researcher asks you to run it because the website owner has not replied and evidence may expire. Which is the best next action?

- ☐ **A.** Request a video demonstration and treat the issue as validated if the researcher reproduces it without requiring you to run the attachment.
- ☐ **B.** Ask the website owner to test the checker during a quiet period before deciding whether the report requires security escalation.
- ☐ **C.** Preserve and route the report promptly through the security-reporting process, leaving validation and attachment handling to authorized personnel.
- ☐ **D.** Request a new report without the attachment and defer escalation until the submission contains no potentially unsafe material.

2 A teammate has sent internal documents to personal email for a month. They cite poor home connectivity and offer to delete the copies. The examples you saw look routine, but you have not reviewed the complete history. Your lead suggests coaching the trusted employee instead of assessing the transfers. Which is the best next action?

- ☐ **A.** Watch the teammate delete the personal copies and record coaching, escalating if the same behavior occurs after that instruction.
- ☐ **B.** Preserve the known details and report the pattern through the approved process so scope and appropriate handling can be assessed.
- ☐ **C.** Review the month's documents within the team and report only if you identify customer records or material explicitly labeled Confidential.
- ☐ **D.** Obtain a retrospective manager exception for the transfers and move future work to company systems, retaining the employee's deletion assurance.

3 A managed update requires a restart by tomorrow. You open the official support portal from your bookmark and find a matching deployment notice. No email attachment or external installer is involved. A break is available today. A teammate says you should wait for personal telephone verification because updates can be faked. Which is the best next action?

- ☐ **A.** Wait for a technician to telephone, treating the usual management tool and matching official notice as insufficient verification for this restart.
- ☐ **B.** Save your work and complete the verified managed restart within the deadline, using normal support if the deployment differs or fails.
- ☐ **C.** Download the supplier's newest installer instead, ensuring the laptop receives the latest release rather than the version named in the company notice.
- ☐ **D.** Ask your manager whether your role needs this update and delay the restart if their response arrives after the published deadline.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 07

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A benefits page has the company's familiar design and a clean link-scan result. Its address differs from the usual portal by two swapped letters. Your colleague says it is a new supplier site, but cannot find an announcement. You still have the original bookmark and enrollment is due today. Which is the best next action?

- ☐ **A.** Proceed if the page redirects to genuine company sign-in, treating the identity service as confirmation that the benefits workflow is authorized.
- ☐ **B.** Use the established portal or official employee directory to validate the change before entering information into the new sign-in workflow.
- ☐ **C.** Ask the colleague whether their enrollment completed successfully and use the new page if their confirmation matches the expected outcome.
- ☐ **D.** Request a second scan and check its encrypted connection, relying on those independent technical checks to support a limited sign-in.

2 An official security restart is due at 4 p.m. Your deadline is 3:30 p.m., but you can save and restart during a break beforehand. Your manager has prioritized the submission, without obtaining an IT exception. A colleague offers instructions to suppress the restart notice until next week. Which is the best next action?

- ☐ **A.** Use the available break to complete the approved restart, seeking IT help only if a real conflict prevents meeting both requirements.
- ☐ **B.** Suppress today's notice and keep the manager's business instruction as evidence that submission took priority over the restart deadline.
- ☐ **C.** Disconnect external websites and postpone the restart, reducing exposure while your manager chooses a less disruptive time next week.
- ☐ **D.** Ask the manager to circulate a written one-day exception, treating that message as sufficient approval without involving the designated IT process.

3 A calendar helper requests mailbox, file and offline access for features planned next year. You need only reminders. A sponsor approves a pilot, but the permission scope is unreviewed. There is no narrower mode. The supplier offers a contract promising not to train AI on your information. Which is the best next action?

- ☐ **A.** Run the sponsored pilot for two weeks under the no-training contract, revoking access if the broader functions prove unnecessary.
- ☐ **B.** Approve the connection but instruct participants to use reminders only, documenting that the extra permissions are outside the pilot's intended activity.
- ☐ **C.** Hold the real-account connection until the scope is approved or choose an alternative that fits the current authorized reminder function.
- ☐ **D.** Connect one senior employee's account first and inspect the app's output before deciding whether additional employees should join the trial.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 08

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 You call your manager using the corporate directory. They confirm an urgent request to send a confidential report externally. This verifies their identity, but the information owner has not approved the disclosure. Your manager asks for an encrypted copy now and promises to obtain approval afterward. Which is the best next action?

- ☐ **A.** Send the encrypted report after recording the callback, because an independently verified manager can take responsibility for the disclosure decision.
- ☐ **B.** Obtain the required information-owner authorization and approved recipient arrangement before sending, while acknowledging that the manager's request is genuine.
- ☐ **C.** Send a limited extract with a separate password and release the complete report once the manager provides the promised information-owner approval.
- ☐ **D.** Ask another manager to witness the callback and support dispatch, retaining both confirmations instead of waiting for the information owner.

2 A meeting app has two modes. Company instructions expressly approve calendar-only reminders without a new review. The default mode also accesses mail and files and is not approved. Both use genuine company sign-in. Your task needs reminders only, and the permission screen lets you choose either mode. Which is the best next action?

- ☐ **A.** Choose the default mode and disable unwanted features afterward, relying on approval of the app and its genuine company sign-in.
- ☐ **B.** Pilot the default with one account and review activity before enabling the same broader features for the rest of the team.
- ☐ **C.** Hold both modes for another review because the product includes unapproved optional functions, despite the explicitly permitted narrow configuration.
- ☐ **D.** Choose calendar-only mode, confirm the permission screen matches that scope and continue without enabling the additional mailbox or file functions.

3 An expected supplier joins a video meeting using their normal display name. The invitation authorizes discussion of public milestones only. They request a confidential staff list to reconcile the project team. A colleague recognizes the voice, but the camera is off and no approval covers employee information. Which is the best next action?

- ☐ **A.** Validate the participant independently and obtain the required specific sharing authorization before displaying or sending the employee list.
- ☐ **B.** Call the supplier's established number and share the list after confirming identity, treating the meeting invitation as sufficient authorization for project information.
- ☐ **C.** Ask the organizer to confirm the reconciliation would help the project and share only on screen, preventing recording and file downloads.
- ☐ **D.** Confirm the list is accurate with your colleague and share it, relying on the expected display name and recognizable voice for recipient validation.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 09

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 You own a customer-invoice folder and discover a public link active for eleven days. You remove it immediately. Several views are unexplained, but no download is confirmed. Your lead suggests logging the corrected setting in the monthly review because access is now restricted and the records remain unchanged. Which is the best next action?

- ☐ **A.** Report the prior exposure promptly and preserve available sharing and access details so the appropriate team can assess its scope.
- ☐ **B.** Confirm the corrected permissions with another employee and close the matter if the public link no longer opens any invoices.
- ☐ **C.** Ask known project contacts whether they viewed the invoices and escalate if their responses leave any of the recorded accesses unexplained.
- ☐ **D.** Replace the invoices with redacted copies and retain a summary of the configuration change for the next monthly governance review.

2 A customer asks for a new meeting app. You verify the request over their known number, but company software approval is still required. Your approved meeting service is available. Two colleagues have already installed the app, and its installer identifies a recognized publisher. The customer prefers it for today's call. Which is the best next action?

- ☐ **A.** Install it for this call after recording the verified customer request, submitting it for review before any subsequent meeting.
- ☐ **B.** Join from a personal device with the required work documents, avoiding a new installation or configuration change on the managed laptop.
- ☐ **C.** Offer the available approved meeting route and seek the normal software review before installing or using the new app for work material.
- ☐ **D.** Ask an already installed colleague to host and show the confidential material, preventing additional installations while the product review is pending.

3 A publicly posted office photo exposes a team application password. The photo is removed and recent activity looks normal. Changing the password will inconvenience several colleagues. The page owner says the view count was small. You do not administer the account and cannot check the entire exposure period. Which is the best next action?

- ☐ **A.** Retain the password while restricting the account to current team members, replacing it if a review later identifies an unauthorized sign-in.
- ☐ **B.** Confirm the live image is gone and request future monitoring, treating replacement as unnecessary unless another copy of the photo is located.
- ☐ **C.** Escalate the exposed secret for authorized replacement and historical-use assessment, arranging removal of accessible copies where possible.
- ☐ **D.** Use the small view count and clean recent history to defer replacement until the team's next scheduled access-maintenance window.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 10

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A work document briefly contained a recovery code. The latest version is clean, but older versions remain available to an external project group. No misuse is known. The document owner offers to remove history at project close. You are a contributor and have no authority to change the account. Which is the best next action?

- ☐ **A.** Remove the old version now and keep the code if every external group member confirms they neither copied nor used it.
- ☐ **B.** Remove the project group's document access and defer invalidating the code because the latest version no longer displays the information.
- ☐ **C.** Raise the exposure for authorized invalidation of the code and review of possible use, while arranging restriction of the exposed versions.
- ☐ **D.** Remind the external group of confidentiality obligations and request monitoring, avoiding an account change without evidence that the code was actually used.

2 While traveling, your approved secure-access connection drops. Your mobile hotspot remains connected and the confidential record page stays visible. Company instructions require this connection and say to pause if it drops. You can reconnect through the normal application. A colleague says hotspot encryption is an adequate replacement. Which is the best next action?

- ☐ **A.** Pause the task and restore the approved connection, confirming it is active before continuing access to the confidential records.
- ☐ **B.** Continue reading the already-open record without requesting new pages, relying on the hotspot and website's existing encrypted connection.
- ☐ **C.** Save the currently visible records locally and work offline until the company connection becomes stable, avoiding additional network access.
- ☐ **D.** Use a reputable personal VPN temporarily and continue, substituting another encrypted connection while the company service is being restored.

3 A chat message gives you a code to open a document. You enter it on the genuine company sign-in page reached through your own bookmark. The next screen says you are authorizing an unfamiliar device or app. The sender says this is the new large-document workflow. Which is the best next action?

- ☐ **A.** Finish because you independently opened the authentic sign-in page, then assess whether the promised document appears before taking any further action.
- ☐ **B.** Ask the sender to confirm the displayed app name in the same chat and authorize it if their reply matches the screen.
- ☐ **C.** Stop the authorization and report the unexpected request, since the genuine sign-in page does not validate the device or app being authorized.
- ☐ **D.** Authorize once and sign out after viewing the document, limiting the unfamiliar application's use to this single task and session.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 11

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A USB drive is labeled with a real employee's name. That employee confirms losing a drive and asks you to check for a named folder. A colleague offers a spare disconnected laptop. You are not authorized to inspect unknown removable devices, and a formal handling route is available. Which is the best next action?

- ☐ **A.** Check the folder name on the disconnected spare laptop without opening files, then return the drive using the employee's confirmed office location.
- ☐ **B.** Keep it disconnected and use the approved handling route, providing the employee's claimed ownership and requested folder details to authorized personnel.
- ☐ **C.** Return the unopened drive directly after matching its description, relying on the independently confirmed loss rather than examining the device yourself.
- ☐ **D.** Have the employee describe the folder structure before checking it, establishing stronger ownership evidence than the printed name alone can provide.

2 Your manager's chat sends a familiar file-sharing link for a real project. The sharing notice names an unfamiliar external organization. Your manager is unavailable for a call. The project does use advisers, and a link scan reports no malicious content. The document requires a fresh work sign-in. Which is the best next action?

- ☐ **A.** Confirm the request in the manager's existing chat and proceed if the account repeats the project details and the need to sign in.
- ☐ **B.** Open it through a managed isolated browser, relying on the real sharing service and clean scan to control the remaining document risk.
- ☐ **C.** Ask a project colleague to confirm that external advisers are involved and proceed if the document's project description matches their knowledge.
- ☐ **D.** Hold interaction until the request and external sharing arrangement can be independently validated through an approved secondary communication route.

3 You must print a confidential employee report. Policy requires badge release, which is available on the shared printer. Its default queue prints immediately. A colleague offers to collect the pages while you prepare the meeting room. All attendees are authorized to see the report, and time is short. Which is the best next action?

- ☐ **A.** Use the immediate queue while the colleague watches, treating supervised collection as equivalent to the policy's personal-release requirement.
- ☐ **B.** Select personal badge release, collect the complete job when you release it and keep it secure for the authorized meeting.
- ☐ **C.** Print at the empty meeting-room printer and collect it after preparing the room, reducing exposure to general office traffic.
- ☐ **D.** Use a Confidential cover sheet on the immediate queue and have the colleague seal the output before carrying it to the meeting.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 12

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A notes extension requests access to every website. You can set it to activate only when clicked. Its supplier promises no retention and it comes from a recognized browser store, but it is not approved for work. Your browser also opens confidential applications. A colleague says click-only activation resolves the concern. Which is the best next action?

- ☐ **A.** Use click-only activation on meeting pages, relying on the supplier's no-retention promise to address any work content the extension reads.
- ☐ **B.** Install it in a separate browser profile on the same laptop and consider it approved if confidential sites are not opened there.
- ☐ **C.** Seek review of its permissions and data handling before work use; click-only activation reduces exposure but does not establish approval.
- ☐ **D.** Install the regularly updated store version and retain the supplier's privacy statement, combining publisher controls with a written no-retention commitment.

2 An owner approves a limited supplier extract through a restricted transfer folder. The source workbook also contains hidden unrelated tabs and internal comments outside approval. The supplier asks for the original to preserve formatting and offers to ignore the extra material. An approved clean-extract template is available. Which is the best next action?

- ☐ **A.** Hide unrelated tabs and filter comments in the original workbook, preserving formatting while instructing the supplier to open only the approved material.
- ☐ **B.** Create and check the limited extract using the approved template, transferring only the authorized fields and records through the restricted folder.
- ☐ **C.** Encrypt the full workbook and send the password separately, using the restricted folder and existing agreement to protect the additional information.
- ☐ **D.** Convert the visible workbook sheets to images, treating removal of editable cells and hidden formulas as sufficient to meet the extract's approval.

3 You email a confidential report to an external namesake. Recall reports success, and the recipient confirms deleting it unread. You cannot tell whether a preview or copy existed elsewhere. Your manager suggests recording the error locally because the recipient cooperated and you have corrected the autocomplete entry. Which is the best next action?

- ☐ **A.** Close the issue using successful recall and written deletion together, reopening it if the recipient later confirms having accessed the attachment.
- ☐ **B.** Report the misdirected disclosure with the recall and deletion evidence so the appropriate owner can assess exposure and any remaining steps.
- ☐ **C.** Ask for explicit confirmation that the recipient did not save or forward it, treating a complete assurance as a substitute for further assessment.
- ☐ **D.** Change the report's sharing settings and remove the address from autocomplete, documenting those corrections as sufficient remediation of the original exposure.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 13

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 Your phone loses service during a reported local outage. On Wi-Fi, you receive notices of an account-recovery change and a sign-in you did not initiate. The notice provides an urgent callback number. Your colleague suggests waiting for service so you can use the normal text-message recovery option. Which is the best next action?

- ☐ **A.** Wait for cellular service before attempting normal text recovery, retaining the notices in case the account changes remain unexplained afterward.
- ☐ **B.** Call the urgent number in the notice and follow its checks, prioritizing immediate assistance because the sign-in and service loss occurred together.
- ☐ **C.** Use independently obtained carrier and account-support contacts to assess possible number takeover and protect affected accounts through trusted alternate routes.
- ☐ **D.** Change the email password through the usual site and consider the issue resolved if the phone reconnects during the reported carrier outage.

2 A teammate already uploaded an internal report to an unapproved AI summarizer and has deleted the visible upload. The business plan promises no model training. They ask you to use the useful summary, saying it contains few staff details and buying the business plan will prevent recurrence. Which is the best next action?

- ☐ **A.** Hold further use and report the upload with its scope and deletion details so authorized owners can assess handling and permitted next steps.
- ☐ **B.** Remove staff names and use the summary, requiring the teammate to buy the no-training business plan before uploading further company reports.
- ☐ **C.** Obtain the supplier's automated deletion confirmation and close the matter if it identifies the report and confirms removal from the user workspace.
- ☐ **D.** Get retrospective project-manager approval for the completed use, retaining the privacy terms and original report as evidence that exposure was limited.

3 An office QR sticker advertises a staff reward. You separately open the employee portal from your bookmark. It confirms the exact campaign address and approves collecting name and meal preference. The form requests only those fields, with no sign-in or payment. A colleague says all QR campaigns should be reported. Which is the best next action?

- ☐ **A.** Report suspected phishing and wait for personal Security confirmation, because the initial contact came through a sticker rather than an employee email.
- ☐ **B.** Participate through the independently validated portal route if you wish, supplying only the stated information within the campaign's approved scope.
- ☐ **C.** Use the scanned page and accept any extra fields it later requests, relying on the portal's confirmation that the supplier runs the campaign.
- ☐ **D.** Ask the noticeboard organizer for a group-chat confirmation and use that reply instead of the official portal's published collection scope.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 14

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 An approved AI summary tells you to upload a staff list to an external verification page. The instruction also appears in pale tiny text in the supplier document, unrelated to its purpose. The supplier calls it a processing aid. Most of the summary looks accurate, but you have not checked it fully. Which is the best next action?

- ☐ **A.** Delete the pale instruction and run the document again, using the new summary if the staff-list request no longer appears.
- ☐ **B.** Disregard the instruction and hold reliance on the affected output, routing it for review and obtaining the needed summary through a validated method.
- ☐ **C.** Ask the assistant why verification is needed and proceed if it identifies the supplier and explains a business purpose consistent with their account.
- ☐ **D.** Remove the unusual paragraph from the output and use the accurate-looking remainder, since the unrelated instruction can be isolated from the main content.

2 You deny unexpected sign-in prompts and change your password through the known company site. The prompts stop. A person claiming to be IT says in chat that you can close the ticket. You have not independently validated the helper or established whether a sign-in succeeded before the change. Which is the best next action?

- ☐ **A.** Close the ticket after recording that the prompts stopped, reopening it if another unrecognized request arrives using the changed password.
- ☐ **B.** Ask the helper in the same chat to confirm no sessions remain, accepting their reply if it includes the genuine ticket number.
- ☐ **C.** Keep the event in the approved investigation process and provide the prompt and password-change details for assessment of sessions and required containment.
- ☐ **D.** Register a new authentication method and close the issue, treating replacement of both the password and approval method as sufficient containment.

3 Authorized teammates share a queue login. A spreadsheet records each shift, but overlapping shifts make an incorrect change impossible to attribute. Your supervisor proposes daily password rotation and recording initials per task. Individually attributable access is available through the normal process, though it takes time to arrange. Which is the best next action?

- ☐ **A.** Arrange individually attributable access, using an explicitly approved interim method if required rather than treating shared-password records as reliable attribution.
- ☐ **B.** Rotate the password at every handover and record its recipients, using the shift sheet to determine who was responsible for later changes.
- ☐ **C.** Require a witness for important changes under the shared login, retaining common access because every team member has a legitimate queue responsibility.
- ☐ **D.** Restrict the login to one supervised device and record initials before every change, preserving common credentials for uninterrupted team access.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 HR confirms a former employee has a legitimate request for a personal document, but has not identified the releasable file. Their old folder also holds confidential team records. They suggest identifying it during a screen share under your account. Your manager supports helping them complete the request today. Which is the best next action?

- ☐ **A.** Let the former employee identify it during supervised screen sharing, withholding download until your manager has checked the selected document.
- ☐ **B.** Have the designated HR or IT owner identify and release the authorized personal material without exposing the old folder or sharing your session.
- ☐ **C.** Copy files matching their description into a temporary external folder and ask them to delete anything that does not belong to the retrieval request.
- ☐ **D.** Obtain their written declaration of ownership and send the described file, retaining HR's confirmation that a legitimate personal-document request exists.

2 A personal backup app has synchronized work folders for weeks. The cloud account is private, encrypted and protected by multi-factor authentication. No sharing link is known. The employee offers to delete everything and uninstall the app immediately. Nobody has assessed what was uploaded or whether copies remain elsewhere. Which is the best next action?

- ☐ **A.** Watch deletion and uninstallation, treating private encrypted storage plus removal of the visible folder as sufficient resolution of the external backup.
- ☐ **B.** Use the approved route to stop further unauthorized transfer, preserve scope details and follow coordinated instructions for assessing and removing retained copies.
- ☐ **C.** Change the cloud password and disable external links, permitting backup temporarily while the team arranges a suitable company alternative.
- ☐ **D.** Review a sample of backed-up files and report only if it includes customer records, since ordinary internal notes remain under the employee's control.

3 An approved disposal supplier collected old laptops. You must sign completion, which requires destruction evidence. You have serial-number collection receipts and a destruction contract, but no evidence for these items. The project owner asks you to sign so payment can proceed. You cannot waive the evidence requirement. Which is the best next action?

- ☐ **A.** Sign with the serial-number receipt and contract, noting that the supplier's destruction evidence will be attached when its normal paperwork arrives.
- ☐ **B.** Ask the project owner to countersign completion, using shared accountability while the approved supplier finalizes the destruction documentation.
- ☐ **C.** Record collection as confirmed and destruction as unverified, obtaining the required evidence or formal exception before signing completion of the process.
- ☐ **D.** Obtain a telephone assurance that destruction occurred and sign, retaining the call record as a practical substitute for the specified evidence.

FINAL ANSWERS: **Q1:** _____ **Q2:** _____ **Q3:** _____

Set 16

3 minutes | 3 questions

Name / ID: _____ Team: _____

Choose one best answer per question. Pass requires 3/3. No negative marking.

1 A team's unapproved task board contains customer details. A reputable supplier offers an enterprise contract, but current storage and sharing have not been assessed. One lead wants immediate deletion; another wants to buy the contract and continue. Neither has involved the designated information or risk owner. Which is the best next action?

- ☐ **A.** Delete the board and account immediately, treating removal of the unapproved service as complete remediation of its previous customer-data use.
- ☐ **B.** Raise the use and affected information promptly, limit further unnecessary uploads and follow coordinated guidance on exposure assessment and an approved transition.
- ☐ **C.** Purchase the enterprise contract and restrict membership, recording those supplier and access changes as sufficient authorization for the existing workflow.
- ☐ **D.** Keep existing data but stop adding new customers, leaving the lead to decide whether a formal review is needed after the delivery deadline.

2 The official support page confirms a sharing-control outage. This control normally blocks unauthorized external recipients. A documented fallback allows an available owner to check recipients and content manually. You need to send a confidential report to an approved partner. The team has seen no alerts during the outage. Which is the best next action?

- ☐ **A.** Send to the established partner address because that recipient is approved and no alert identifies a problem with this particular report.
- ☐ **B.** Hold all external reports until the control is restored, disregarding the fallback because manual review cannot provide identical technical enforcement.
- ☐ **C.** Use the documented owner-check fallback before sending, without treating silence from the unavailable control as evidence that the transfer is permitted.
- ☐ **D.** Encrypt the report and send now, retaining the official outage notice as evidence explaining why the normal automated check did not run.

3 An accidental-share case has been assessed by the designated incident team. Containment is recorded, your assigned actions are complete and the authorized case owner documents closure and retention instructions. Your manager suggests privately keeping all evidence indefinitely. A colleague wants a new investigation despite having no new evidence. Which is the best next action?

- ☐ **A.** Follow the authorized closure and retention instructions, raising any genuinely new evidence through the same case route rather than creating a private collection.
- ☐ **B.** Keep separate copies of every sensitive message indefinitely, preserving your ability to challenge the closure if another team later questions the decision.
- ☐ **C.** Reopen the case for another team's review without new evidence, because residual theoretical uncertainty means the original investigation cannot be considered complete.
- ☐ **D.** Delete all related messages and affected records immediately, treating closure as proof that no evidence is needed regardless of the retention instructions.
